Is that possible and how? string s = string(std::vector v); A: 1.You can use std::stringstream in following way std::vector v; std::string s = std::stringstream() std::vector v; std::string s = std::stringstream() std::string s = std::stringstream().str(); Changes in fluorescence intensities of monochlorotetracycline and antimycin A in isolated mitochondria. Fluorescence changes of mitochondrial substances were observed after addition of antimycin A and monochlorotetracycline to submitochondrial particles. The quenching of fluorescence of the two substances appeared in the early stage of ATPase activity. The decreased intensities of the fluorescent substances in the course of ATPase activity were more rapid and extensive for antimycin A than for monochlorotetracycline. Monochlorotetracycline was found to compete with ATP for binding on mitochondrial enzymes, possibly to the inhibitory site of the respiration.Q: Determine whether $\sum_{i=0}^$ 09e8f5149f

But for my following classes it does not seem to work this way: I have a ctors getters. For this class I had to do a manually created spring bean, because when I tried it with @Autowired it did not work. class A { @Autowired private B b; public A() { b.doSomething(); } @Getter public B getB() { return b; } } class B { @Autowired public B(C c) { c.doSomething(); } public void doSomething() { //stuff } } class C { @Autowired public C(A a) { a.getB(); } public doSomething() { //stuff } } Is this the intended way of doing dependency injection? Or should Spring use the ctor of B A: @Autowired needs an object that implements a matching interface. In this case, B does. class C { @Autowired A a; public doSomething() { B b = (B) a.getB();
